Dr. Badar is an Assistant Professor of Medicine, working as a leukemia and myeloid disorder specialist at Mayo Clinic.

His research interest is in Acute Leukemia and germline predisposition syndrome.

His long-term goal is to understand mechanisms of clonal evolution of leukemia, develop innovative strategies to improve its clinical outcome.

While treating patients with myeloid neoplasms, he developed strong interest in patients with DDX41 mutation related germline predisposition syndrome.

As a PI and co-Investigator, he has worked on research projects related to DDX41 mutation.

Currently conducting studies to explore functionality of DDX41 variants to determine pathogenicity and single cell sequencing to discover unique genetic and epigenetic event associated with disease progression in DDX41 mutated patients.

He is also actively involved in clinical trials in myeloid neoplasms at National and International level.
